Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5'
GAGGAGAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. CDNA went through one round of subtraction to Rot = 100.0 Second strand cDNA was prepared with the primer adapter of sequence [5'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               details.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gggcatgggcatcgtc 102
                                                                                                                                                                                                                          The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the non-normalized prefrontal cortex library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. Seq primer: M13 Forward
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AI838527 305 bp mRNA EST 1.

* NOTE: This is a 'working draft' sequence. It currently
consists of 3 contigs. Gaps between the contigs
are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
of the gaps between them are based on estimates that have
provided by the submittor.

                                                                                                                                                                                                                                                                                                                                                                                     Web: www.genoscope.cns.fr)
The cDNA library to be analyzed within the framework of this project was created using a Botrytts cinerea strain which was grown under conditions of nitrogen deprivation, which is the normal situation for B. cinerea during its development on its host plant. The library was produced in an oriented direction, in the pBSII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nitrogen deprivation.

Beta 2-adrenergic receptor gene alleles may be ci dentified by any known method e.g. denaturing gel electrophoresis cc or PCR amplification (see also V52615-17). Identification which comprises amplifying a portion of each allele which comprises amplifying a portion of each allele which comprises determining nucleotide sequences of these portions (e.g. by automated sequence analysis). The invention identifies a known colymorphism in the beta 2-adrenergic receptor gene as being linked to adverse responses to regular beta-agonist administration; coposition 16 of the encoded protein can be either Arg or Gly, and cindividuals homozygous for Arg16 are more susceptible.

Example 15; Page 75-76; 118pp; Japanese.

The present invention describes DNA which participates in the regulation of expression of PEBP2 alpha A gene. The DNA produces a regulator protein with the activity of promoting bone formation and can serve as a promoter for prevention and treatment of bone diseases including osteoporosis. The present sequence represents a polynucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (SUMU ) SUMITOMO PHARM CO LTD. pr factor Osf2 - useful for, e.g. treatment of osteogenic diseases, in pr vaccines and for diagnosis

PS Claim 5; Pages 185-187; 273pp; English.

CC This DNA encodes a native Osf2/Cbfal polypeptide (an osteoblast specific factor-2 encoded by the CBFAl locus). Host cells containing a vector comprising a Osf2/Cbfal nucleic acid are used for the recombinant CC production of the protein. The Osf2/Cbfal has osteoblast-specific comprising a Cilvity (particularly for treating osteogenic diseases, optionally when expressed from a gene therapy vector). Osf2/Cbfal is also cused to raise antibodies, to screen for modulators of its activity; used in vaccines and to detect specific antibodies (for diagnosis of bacterial CC infections). The Osf2/Cbfal polynucleotides can be used to produce transgenic animals or pluripotent non-human animal cells, while their fragments are used to detect Osf2/Cbfal genes by hybridisation, or as antisense molecules or ribozymes for downregulation of gene expression. CC Osf2/Cbfal polynucleotides are used for specific transcription of osteoblast-specific genes that have an OSE2 sequence element; to generate an immune response; in binding assavs to detect oser.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PT Canine beta 2 and beta 3 adrenergic receptors and coding sequences - PT useful for identifying specific ligands and (ant)agonists to develop specific treatments for obesity in dogs

PS Claim 1; Page 45-46; 79pp; French.

CC receptor (RA-Ca-b2) gene. The sequence was isolated from a CDNA library CC constructed from polyA+ RNA purified from dog brown adipose tissue cells.

CC The probe was a 600 bp fragment of the coding region of the human beta-3 CC adrenergic receptor covering the region from the initiation codon to CC transmembrane domain 5 (TM5). The full length insert was cloned into M13 CC expressed e.g. in a mammalian cell, by subcloning into an expression CC expressed e.g. in a mammalian cell, by subcloning into an expression CC expressed e.g. in a mammalian cell, by subcloning into an expression CC expressed e.g. the beta-2 receptor can be used in comparative Structure-function studies, e.g. for differential screening of ligands CC specific for RA-Ca-b2 or RA-Ca-b3 (W44933).

PS Claim 72; Pages 155-156; 273pp; English.

CC Specific factor-2 encoded by the CBFA1 locus). Host cells containing a CC specific factor-2 encoded by the CBFA1 locus). Host cells containing a CC vector comprising a Osf2/Cbfa1 nucleic acid are used for the recombinant CC production of the protein. The Osf2/Cbfa1 has osteoblast-specific CC transcriptional activity (particularly for treating osteogenic diseases, CC optionally when expressed from a gene therapy vector). Osf2/Cbfa1 is also consider the containing of the service of the activity; used contained to detect specific antibodies (for diagnosis of bacterial infections). The Osf2/Cbfa1 polynucleotides can be used to produce transgenic animals or pluripotent non-human animal cells, while their cf ragments are used to detect Osf2/Cbfa1 genes by hybridisation, or as configuration of osteoblast-specific genes that have an OsE2 sequence cc element; to generate an immune response; in binding assays to detect OSE2 element; for purification of such elements and to induce differentiation of osteoblast progenitors for stimulating formation, growth, replacement can of osteoblast progenitors for stimulating formation, growth, replacement conficulty other genes to which Osf2/Cbfa1 can bind; for affinity other genes to which Osf2/Cbfa1 can bind; for affinity other genes to which Osf2/Cbfa1 can bind; for affinity other genes to which Osf2/Cbfa1 can bind; for affinity other genes to which Osf2/Cbfa1 can bind; for affinity other genes to which Osf2/Cbfa1 genes are used to genes, e.g. osteoblast-specific expression of homologous or heterologous contained contained benefic collagence and enhancer) from Osf2/Cbfa1 genes are used to collagence, and collagence and colla
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Š

Antibodies, optionally, labelled, are used as immunoassay reagents for detecting Osf2/Cbfal; in DNA-binding assays to identify other genes to which Osf2/Cbfal and hid; for affinity purification of Osf2/Cbfal and to clone related genes. Also regulatory sequences (promoter and enhancer) from Osf2/Cbfal genes are used to provide osteoblast-specific expression of homologous or heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid expressing the osteoblast-specific transcription factor Osf2 - useful for, e.g. treatment of osteogenic diseases, vaccines and for diagnosis Claim 72; Pages 155-156; 273pp; English.
                    sialoprotein. The present sequence of the Osf2 promoter and 5' UTR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ducy P, Karsenty G; WPI; 99-059837/05.

The DNA produces a regulator protein with the activity of promoting bone formation and can serve promoter for prevention and treatment of bone diseases including osteoporosis.

The sequence shows the human cartilage link protein gene. The link protein can be used in conjunction with a cartilage matrix protein to promote binding of a complex of proteoplyvan and hyaluronic acid to collagen. The protein can be used to treat cartilage in joints esp. after damage by arthritis (esp. osteoarthritis) or to promote cartilage matrix formation in vitro to provide materiall for restorative or cosmetic surgery. It also promotes attachment to

PT infection.

PS Claim 1; Page 1239-1244; 2084pp; English.

CC A computer readable medium has been developed which has recorded on it CC 982 nucleotide sequences isolated from the Enterococcus faccalis genome. CC 12938 to X13919 represent these nucleotide sequences which are primary CC nucleotide sequences, also known as contigs. The computer-based system CC can identify fragments of the Enterococcus faecalis genome with CC commercial importance. The products can be used to detect the presence CC of Enterococcus faecalis in samples. They can also be used for CC diagnosing Enterococcal infection in an animal and monitoring CC progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or CC another related organism, in vivo or in vitro. In particular the constant of the property of the Enterococcus faecalis nucleotide sequences and the property of the Enterococcus faecalis nucleotide sequences.

Tanimal feeds
Example 2; Fig 7; 80pp; English.
Sequence was deduced from the carotenoid biosynthesis pathway. The sequence was deduced from the carotenoid biosynthesis pathway. The sequence was deduced from inserts of 6 clones obtd. from genomic libraries e.g. by PCR amplification (see also T45144-45) and use of partial clones to screen the library. The identities of the gene products (see also W06513-19 and W00871) were detd. by examining carotenoid accumulation in E. coli hosts transformed with deleted variants of the gene cluster. The isolated genes can be used in different combinations to produce carotenoids in transformed host cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               identifying genes which cause chromosome missegregation - useful for identifying genes of and treatments for diseases, e.g. Alzheimer's disease, cancer and ageing claim 16; Fig 1; 77pp; English.

Identifying genes which cause improper chromosome segregation, identifying genes which cause improper chromosome segregation and processes caused by genes encoding chromosome missegregation promoters was exemplified using Alzheimer's disease. The sequences given in T87401 to T87426 can be used in the above methods. It is not clear from the figure legend, the figure and the disclosure of the specification which sequence of Fig 1 and Fig 28 is the AD4/AD3LP or the AD3 sequence.

pr screening of familial Alzheimer's disease, cerebral disorders, etc. ps Claim 8; page 148-150; 178pp; English.

CC This sequence represents the coding sequence for the human presenilin-2. This sequence represent the coding sequences for the two different cryonoms of wild type human presentilin-1 (PS-1). The form represented by CC T40029 results from alternate splicing of the genomic DNA sequence. CC T40029 resents the coding sequence for wild type mouse PS-1. The CC presentilins are a family of highly conserved integral membrane proteins common mutational hot spot regions. Mutations in PS genes are implicated common mutational hot spot regions. Mutations in PS genes are implicated common mutational hot spot regions. Mutations in PS genes are implicated common mutational hot spot regions. Mutations in PS genes are implicated common mutational hot spot regions. Mutations in PS genes are implicated common familial Alzheimer's disease (AD) and possibly other diseases such as CC cerebral haemorrhage, schizophrenia, depression etc. So detection of containing containing containing contains sequences antibodies selective for mutant forms of the encoded proteins (such as W05736) and modulators of PS gene expression are useful potentially useful for treatment of AD etc. Transgenic animals are useful caffinity purification and in-immunoassays.
